#### **Rendered** to

#### **REGUPOL AMERICA**

#### Series/Model: 5 mm Regupol Sonus Rubber Underlayment

#### Specimen Type: Floor/Ceiling Assembly

#### Overall Size: 3023 mm by 3632 mm

STC	54
IIC	50
ΔIIC	20

#### **Test Specimen Identification:**

Floor Topping: 7 mm Ceramic Tile Underlayment: 5 mm Regupol Sonus Rubber Underlayment Floor Slab: 152 mm Concrete Slab

Reference should be made to Architectural Testing, Inc. Report E1551.04-113-11 for complete test specimen description.

130 Derry Court York, PA 17406 p. 717.764.7700 f. 717.764.4129

#### **Acoustical Performance Test Report**

REGUPOL AMERICA 33 Keystone Drive Lebanon, Pennsylvania 17042

Report	E1551.04-113-11
Test Date	10/01/14
<b>Report Date</b>	01/05/15
<b>Record Retention End Date</b>	10/01/18

#### **Project Scope**

Regupol America contracted Architectural Testing to conduct airborne sound transmission loss, impact sound transmission, and delta impact insulation tests. A summary of the results is listed in the Test Results section, and the complete test data is included as attachments to this report. The client provided the test specimen.

#### **Test Methods**

The acoustical tests were conducted in accordance with the following standards. The equipment listed in the attachments meets the requirements of the following standards.

ASTM E 90-09, Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions

ASTM E 413-10, Classification for Rating Sound Insulation

ASTM E 492-09, Standard Test Method for Laboratory Measurement of Impact Sound Transmission Through Floor-Ceiling Assemblies Using the Tapping Machine

ASTM E 2179-03 (2009), Standard Test Method for Laboratory Measurement of the Effectiveness of Floor Coverings in Reducing Impact Sound Transmission Through Concrete ASTM E 989-06 (2012), Classification for Determination of Impact Insulation Class (IIC) ASTM E 2235-04 (2012) Standard Test Method for Determination of Decay Rates for Use in Sound Insulation Test Methods

#### **Test Procedure**

All testing was conducted in the VT test chambers at Architectural Testing, Inc. located in York, Pennsylvania. The microphones were calibrated before conducting the tests.

The airborne transmission loss test was conducted in accordance with the ASTM E 90 test method using the single direction method. Two background noise sound pressure level and twenty sound absorption measurements were conducted at each of five microphone positions.

#### Test Procedure (Continued)

Four sound pressure level measurements were made simultaneously in both rooms, at each of five microphone positions.

The impact sound transmission test was conducted in accordance with the ASTM E 492 test method. Two background noise sound pressure level, two sound pressure level measurements with the tapping machine operating at each position specified by ASTM E 492, and twenty sound absorption measurements were conducted at each of five microphone positions.

The delta impact insulation test was conducted in accordance with ASTM E 2179 test method. In addition to the impact sound transmission test, two sound pressure level measurements with the tapping machine operating at each position specified by ASTM E 492 with only the concrete slab installed.

The air temperature and relative humidity conditions were monitored and recorded during all measurements.

#### **Test Conditions**

Source Room		Receive Room	
Maximum Temperature	20.7 °C	Maximum Temperature	20.9 °C
Minimum Temperature	20.4 °C	Minimum Temperature	20.8 °C
Average Temperature	20.6 °C	Average Temperature	20.9 °C
Maximum Relative Humidity	74%	Maximum Relative Humidity	72%
Minimum Relative Humidity	72%	Minimum Relative Humidity	72%
Average Relative Humidity	73%	Average Relative Humidity	72%

#### **Test Calculations**

The STC (Sound Transmission Class), IIC (Impact Insulation Class), and  $\Delta$ IIC (Delta Impact Insulation Class) ratings were calculated in accordance with ASTM E 413, ASTM E 989, ASTM E 2179, respectively.

Material	Dimensions (mm)	Thickness (mm)	Manufacturer and Series	Quantity	Average Weight		
	304.8 by 304.8	7.0	N/A	10.98 m²	14.09 kg/m <sup>2</sup>		
Ceramic Tile	Note: Grout was placed into the 6.35 mm joints between the ceramic tile and wiped clean. The ceramic tile was placed with light pressure onto a bed of mortar on the underlayment. The mortar was set using a 6.35 mm by 6.35 mm trowel. Both the grout and mortar were allowed to cure to manufacturer's specifications.						

Material	Dimensions (mm)	Thickness (mm)	Manufacturer and Series	Quantity	Average Weight
Rubber Underlayment	3048 by 1219.2	5.0	Regupol Sonus	10.98 m <sup>2</sup>	3.49 kg/m <sup>2</sup>
	Note: Loose laid.				
Concrete Slab	3023 by 3632	152.0	N/A	10.98 m <sup>2</sup>	366.18 kg/m <sup>2</sup>
	Note: The concret	te slab was ins	stalled in a test frame flush to the source	e room.	1

#### **Test Specimen Materials and Installation Details** (Continued)

#### Comments

The total weight of the floor/ceiling assembly was 4213.7 kg. Architectural Testing will store samples of the test specimen for four years. Photographs of the test specimen are included in the attachments. A drawing of the test specimen is included in the attachments.

Architectural Testing will service this report for the entire test record retention period. Test records, such as detailed drawings, datasheets, representative samples of test specimens, or other pertinent project documentation, will be retained by Architectural Testing for the entire test record retention period.

This report does not constitute certification of this product nor an opinion or endorsement by this laboratory. It is the exclusive property of the client so named herein and relates only to the specimen tested. This report may not be reproduced, except in full, without the written approval of Architectural Testing.

Deficiencies 32 (Sum of Deficiencies)

54

Notes:

1) Receive Room levels less than 5 dB above the Background levels are highlighted in yellow.

2) Specimen TL levels listed in red indicate the lower limit of the transmission loss.

3) Specimen TL levels listed in green indicate that there has been a filler wall correction applied
