Impact Sound Transmission Test

ASTM E 492 – 09 / ASTM E 989 – 06

On

8 Inch (203mm) Concrete Slab Overlaid with Engineered Hardwood Flooring Adhered with Sikabond-T35 Adhesive over Regupol Sonus HS500, 5 mm Underlayment Adhered with Sikabond-T35 Adhesive With Suspended Gypsum Board Ceiling

Report Number: NGC 7011100_R2

Assignment Number: G-709

Date	SUMMARY
Approval Date: 9/13/2011	Original issue date. Original NGCTS report #: NGC 7011100
Reissue Date: 6/24/2014	Reissued Report #: NGC 7011100_R1 The report was reissued due to a client designated company name change.
Reissue Date: 8/20/2014	Reissue Report #: NGC 70110100_R2 The report was revised and reissued due to a client designate product name change and company name change.

Report Number: NGC 7011100_R2

Test Method: This test method is in accordance with American Society for Testing and Materials Standard Test Method for Laboratory Measurement of Sound Transmission Through Floor-Ceiling Assemblies Using the Tapping Machine - Designation: E 492– 09 / E 989-06.
The uncertainty limits of each tapping machine location met the precision requirements of section A1.4 of ASTM E 492-09.

Specimen Description: 8 inch (203mm) Concrete Slab including suspended grid 5/8 inch gypsum board ceiling system, overlaid with, according to client, Engineered wood flooring with Sikabond-T35 adhesive over Regupol Sonus HS500, 5 mm underlayment adhered with Sikabond-T35 adhesive.

The test specimen was a floor-ceiling assembly consisting of the following:

- 1 layer of 13.1mm (0.515 in.) Hard Maple Select V Engineered Hardwood flooring. Samples were 127mm (5 in.) wide, by random length planks. Sample weight was 7.5 kg/m^2 (1.54 PSF).
- 1 layer of Sikabond-T35 adhesive. Sample was troweled on using client supplied P5 trowel.
- 1 layer of, according to client, Regupol Sonus HS500, 5 mm underlayment. The underlayment was adhesively applied to the concrete with Sikabond-T35 adhesive. Measured thickness: 5.18 mm (0.204 in.) Measured weight: 3.7 kg/m^2 (0.76 PSF)
- 1 layer of Sikabond-T35 adhesive. Sample was troweled on using client supplied P5 trowel.
- 203.2mm (8 in.) thick reinforced concrete slab 488.2 kg/m^2 (100.0 PSF).
- 88.9mm (3-1/2 in.) fiberglass unfaced batt insulation. Sample weight was 0.78 kg/m^2 (0.16 PSF). The insulation was laid over the suspended grid system parallel with the main tee's.
- Gypsum board ceiling grid suspension system. System is comprised of main tees and cross tees. The main tees were placed 1219.2mm (48 in.) on center and the cross tees were placed 609.6mm (24 in.) on center. 16 gauge galvanized tie wire was used to attach the main tees to concrete anchors, located 1219.2mm (48 in.) o.c. along the longitudinal axis, suspending the grid 304.8mm (12 in.) below the concrete slab.
- 1 layer of 15.9mm (5/8 in.) Type X gypsum board. Sample was observed to be 15.9mm (0.628 in.) thick and weighed 11.2 kg/m^2 (2.3 PSF). The board was attached 304.8mm (12 in.) o.c. parallel to suspended grid suspension system mains, using 31.8mm (1.250 in.) Type S drywall screws. The board joints were taped.

The overall weight of the test assembly is 511.4 kg/m^2 (104.76 PSF).

The perimeter of the concrete slab was sealed with a rubber gasket and a sand filled trough. The test frame is structurally isolated from the receiving room.

Test Floor Size: 3657.6mm x 4876.8mm (12 ft. x 16 ft.)
Conditioning: Concrete cured minimum of 28 days. Adhesive cured for minimum of 24 hours.
Test Results: The results of the tests are given on pages 4 and 5.
